

# Survey on the Pharmaceutical Strategy - Timely patient access to affordable medicines

Fields marked with \* are mandatory.

## Introduction

---

The EU strives to be a frontrunner in ensuring universal health coverage. In addition, it is a global leader in healthcare research and development and a major trading partner in pharmaceuticals and medical technologies. People across the EU expect to benefit from equal access to safe, state-of-the-art and affordable new and established therapies. Medicines play an important role in this regard, as they offer therapeutic options for diagnosis, treatment and prevention of diseases.

The unprecedented coronavirus pandemic (COVID-19) clearly demonstrates the need to modernise the way the EU ensures that its citizens get the medicines they need. Although this has been thrown into sharp relief by the coronavirus pandemic, it is not a new problem: even prior to the pandemic we witnessed shortages of essential medicines, such as cancer treatments, vaccines and antimicrobials. This calls for a thorough examination of how the supply chain - from the importing of active ingredients, raw materials, and medicines from third countries to internal EU production and distribution – can be made more secure and reliable.

Securing the supply of medicines is not only about existing therapies. There is also a need to ensure that the European pharmaceutical industry remains an innovator and world leader. Innovative technologies such as artificial intelligence as well as data collected from clinical experience (“real world data”) have the potential to transform therapeutic approaches and the way medicines are developed, produced, authorised and placed on the market and used. Innovation needs to be focused on areas of most need.

At the same time, more must be done to ensure that innovative and promising therapies reach all patients who need them: at present, this is not the case, with patients in smaller markets being particularly affected. Health systems, which are also seeking to ensure their financial and fiscal sustainability, need new therapies that are clinically better than existing alternatives as well as cost effective.

Finally, we are more aware than ever of the need to reduce the environmental footprint of medicines.

All these challenges will be addressed in the forthcoming EU Pharmaceutical Strategy, which should cover the whole life-cycle of pharmaceutical products from scientific discovery to authorisation and patient access.

More information on the context of the initiative, on the challenges identified so far and on the objectives can be found in the roadmap (<https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12421-Pharmaceutical-Strategy-Timely-patient-access-to-affordable-medicines>). Whether you are a concerned citizen or a professional in the area of medicines we would like you to let us know if you share our

objectives, what actions we should focus on and whether there are any additional aspects that we should cover.

After some introductory questions about yourself, the questionnaire continues with questions on the Pharmaceutical strategy.

When replying, please keep in mind that the questions in this survey were developed to address the long-standing issues identified in the EU pharmaceuticals system. These may be related to the problems arising from the coronavirus pandemic but are broader than that. The end of the survey includes dedicated questions on coronavirus related issues.

Please note that in this questionnaire, we do not intend to obtain data relating to identifiable persons. Therefore, in case you will describe a particular experience or situation, please do it in a way that will not allow linking to a particular individual, whether it is you or somebody else.

We thank you in advance for your time and input.

---

## About you

---

### \* Language of my contribution

- Bulgarian
- Croatian
- Czech
- Danish
- Dutch
- English
- Estonian
- Finnish
- French
- Gaelic
- German
- Greek
- Hungarian
- Italian
- Latvian
- Lithuanian
- Maltese
- Polish
- Portuguese

- Romanian
- Slovak
- Slovenian
- Spanish
- Swedish

\* I am giving my contribution as

- Academic/research institution
- Business association
- Company/business organisation
- Consumer organisation
- EU citizen
- Environmental organisation
- Non-EU citizen
- Non-governmental organisation (NGO)
- Public authority
- Trade union
- Other

\* Organisation name

*255 character(s) maximum*

Irish Platform for Patient Organisations, Science and Industry (IPPOSI)

\* Organisation size

- Micro (1 to 9 employees)
- Small (10 to 49 employees)
- Medium (50 to 249 employees)
- Large (250 or more)

Transparency register number

*255 character(s) maximum*

Check if your organisation is on the [transparency register](#). It's a voluntary database for organisations seeking to influence EU decision-making.

\* Which stakeholder group do you represent?

- Individual member of the public
- Patient or consumer organisation
- Healthcare professional
- Healthcare provider organisation (incl. Hospitals, pharmacies)
- Healthcare pricing & reimbursement body and/or final payer
- Centralised health goods procurement body
- Health technology assessment body
- Academic researcher
- Research funder
- Learned society
- European research infrastructure
- Other scientific organisation
- Environmental organisation
- Pharmaceuticals industry
- Chemicals industry
- Pharmaceuticals traders/wholesalers
- Medical devices industry
- Public authority (e.g. national ministries of health)
- EU regulatory partner / EU institution
- Non-EU regulator / non-EU body
- Other (please specify)

Are you responding on behalf of a Small or Medium Sized Enterprise?

- Yes
- No

\* First name

Laura

\* Surname

Kavanagh

\* Email (this won't be published)

research@ipposi.ie

\* Publication privacy settings

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

**Anonymous**

Only your type of respondent, country of origin and contribution will be published. All other personal details (name, organisation name and size, transparency register number) will not be published.

**Public**

Your personal details (name, organisation name and size, transparency register number, country of origin) will be published with your contribution.

I agree with the [personal data protection provisions](#)

---

## International dependency and manufacturing

---

*The EU is increasingly dependent on active ingredients originating from outside the EU. This has implications, including as regards increasing the risk of quality issues and shortages of medicines. The recent outbreak of COVID-19 shows that a disruption in the pharmaceutical products supply chain originating from outside the EU could present a major health security issue.*

1. What type of EU action or initiative do you consider helpful to incentivise the production of active pharmaceutical ingredients for essential medicines (e.g. antibiotics, oncology medicines) in the EU?

*800 character(s) maximum*

We are not able to select from one of the choices above due to the technical nature of the question.

2. What action do you consider most effective in enhancing the high quality of medicines in the EU?

*between 1 and 1 choices*

- Stronger enforcement of the marketing authorisation holder responsibilities
- Increased official controls in the manufacturing and distribution chain
- Other (please specify)
- I don't know

Please elaborate your reply.

*500 character(s) maximum*

We are not able to select from one of the choices above due to the technical nature of the question.

However, as a general comment from a patient perspective, it would be important to track and trace medicines through the supply chain to reduce fraudulent activity in the marketplace and to prevent substandard or illegal substances from entering the supply chain.

---

## Access to affordable medicines

---

*A shortage of a medicine occurs when there are not enough medicines in a country to treat every patient with a given condition. Shortages can have a big impact on patients if their treatment is delayed because there is no alternative, or the alternative is not suited to their needs.*

### 3. Are you concerned about medicines shortages in the EU?

- I am concerned
- I am not concerned
- I have no particular opinion

If you wish, please elaborate your reply.

*500 character(s) maximum*

While medicine shortages have been a global issue for some time, they have increasingly affected Ireland and other European countries with significant impact on patient care and total healthcare costs. It will be critical to understand the patients' experience of shortages and the impact on their health. There should be engagement with patients around Brexit or COVID-related shortages. Patient involvement in any relevant policy is vital. Patients should also be able to report shortages.

### 4. Which actions do you think would have the biggest impact on reducing shortages in the EU?

*at most 3 choice(s)*

- Stronger obligations on medicines producers, and other players in the supply chain to ensure medicines are available
- Transparent information exchange among authorities on medicine stocks available in each country
- Increased cooperation among public authorities/national governments on shortages
- Multi-lingual packaging and electronic product information leaflets facilitating purchasing in different countries
- Providing incentives to companies to increase the production of medicines in the EU

- Inform on and make available to patients suitable substitutes for medicines that are at risk of shortage
- Other (please specify).

Please elaborate your reply.

*500 character(s) maximum*

All of the above, tackling shortages requires a holistic approach. The pandemic highlighted the importance of working together on health challenges including medicines shortages. More communication and cooperation between Member States would allow for the true extent of region-wide and country-specific shortages to be reliably ascertained. In turn allowing for the possibility of (voluntary but regulated) bi-/multi-lateral supply sharing or for an urgent, joint EU procurement approach.

*Innovative medicines have to undergo a centralised EU-wide marketing authorisation. Companies often initially market them in a limited number of EU countries. It can take several years before patients in the other EU countries have access to those products.*

5. Do you think that companies that apply for and receive an EU-wide marketing authorisation should be required to make that product available in all EU countries?

- I agree
- I neither agree or disagree
- I disagree
- I don't know

If you wish, please elaborate your reply.

*500 character(s) maximum*

Yes, however exceptions may need to be made for domestic producers or SMEs. Inequity in access to medicines is a major cause of health inequalities. Disparity in patients' access to new medicines persist both among and within EU countries. Inequalities in access to medicines are contrary to the EU Charter of Fundamental Rights, the EU Treaties' commitment to the principle of well-being, and the fundamental European values of equity, solidarity and good quality in healthcare.

*In recent years, there has been an [increase](#) in the number of medicines withdrawn from the market upon decisions by the manufacturers.*

6. Do you have an opinion on the reasons for these market withdrawals?

- Yes
- No

If yes, please elaborate.

*500 character(s) maximum*

IPPOSI is aware that many market withdrawals happen for commercial reasons. Medicines may also be withdrawn for safety reasons. From a patient perspective, the impact of these withdrawals on health outcomes needs to be assessed by a responsible authority and there needs to be greater public transparency around why withdrawals occur.

7. Are you aware of patients not receiving the medicine they need because of its price?

- Yes
- No

If you wish, please elaborate your reply.

*500 character(s) maximum*

Access to medicines includes affordability for patients and health systems. Patients should not incur financial hardship or out of pocket costs to secure access to life-saving or life-changing treatments. Equally, price should not force patients to postpone buying medicine. Member states should work with companies, and each other, to ensure that price is not an obstacle for access. Efforts should be made to increase pricing transparency in line with the World Health Assembly Resolution 2019.

8. Do you think that medicine prices are justified, taking into consideration the costs associated to their development and manufacturing?

- Yes
- No
- I don't know

*High prices for new medicines put pressure on public health spending. The costs for research and development are not publically disclosed and there is no agreement on how to calculate such costs. In certain cases, some EU countries join forces to increase their negotiating power when discussing prices with pharmaceutical companies. Individual pricing decisions in some EU countries may affect others. As an example, some EU countries limit the prices of medicines by linking that price to average prices in other EU countries (we call this "external reference pricing"- ERP). Because of ERP, a pricing decision in one EU country can inadvertently affect the prices in others. Once patents and other forms of market protection expire, generic and [biosimilar](#) medicines can enter the market and compete with the existing ones, this also typically brings down prices. Finally, there are plans to strengthen support to EU countries to work with each other on the clinical effectiveness of new medicines compared to existing alternatives, simply put how much better a medicine works compared to another one. This is part of the so called "health technology assessment" process.*

9. What are the most effective ways the EU can help improve affordability of medicines for health systems?

*at most 3 choice(s)*

- Support the EU countries in better assessing and/or evaluating the value of medicines, meaning the effectiveness of a (new) medicine compared with existing ones
- Help EU countries share experiences and pool expertise on pricing and procurement methods
- Better coordination among EU countries to ensure that pricing decisions taken by one EU country do not lead to negative impacts on patient access in another EU country
- Facilitate, market entry and a healthy market functioning for generics and biosimilars
- More transparency on how the cost of a medicine relates to the cost of its research and development
- There should be a fair return on public investment when public funds were used to support the research and development of medicines
- I don't know
- Other

\* Please explain.

*100 character(s) maximum*

All of the above, tackling affordability requires a holistic approach.

---

## Innovation in early development and authorisation

---

*The European Commission actively supports health research and development through various funding mechanisms (e.g. Multiannual Financial Framework, [Horizon 2020](#), [Innovative Medicines Initiative](#) partnership) and through collaborations between academia, healthcare systems and industry. Furthermore, the EU pharmaceutical legislation includes incentives to stimulate the development of innovative new medicines in areas such as paediatric and rare diseases; and market exclusivity rights to industry.*

10. What actions at EU level do you consider most effective in supporting innovative research and development of medicines?

*at most 3 choice(s)*

- Make the legislative framework more adaptive to new technologies and advances in science

- Provide more public funding for research
- Support (including through funding) private-public partnerships
- Support (including through funding) the creation of start-ups in medical research
- Foster research collaboration between universities, research centres and industry
- Provide research and development incentives in the form of intellectual property or market exclusivity rights for pharmaceutical companies investing in research
- Simplify the requirements for the conduct of clinical trials
- Other (please specify)
- I don't know

Please elaborate your reply.

*100 character(s) maximum*

PPI from the earliest R&D stage. All of the above, tackling innovation requires a holistic approach.

*Expected return on investment in research and development for the pharmaceutical industry depends also on the expected volume of sales; this seems to be one of the root causes of limited availability of certain medicines (e.g. medicines for rare diseases or medicines for children).*

11. What do you consider are the most effective actions related to research and development of medicines in areas where there are limited or no therapeutic options (unmet needs)?

*at most 3 choice(s)*

- Provide market protection (protect a new medicine from competition)
- Provide intellectual property protection
- Provide data protection (protection of the data related to a medicine's clinical trials)
- Agree on a common understanding on what are the areas of unmet need in the EU
- Funding more targeted research at EU level
- Funding more targeted research at national level
- Provide national schemes to support companies economically

- I don't know / no opinion
- Other (please specify)

*The health sector is becoming more digitised, thanks to the increased availability and collection of health data from sources such as electronic health records, patient and disease registries and mobile apps (i.e. real world data) and through the use of artificial intelligence (AI) (i.e. systems that display intelligent behaviour and the use of complex algorithms and software in the analysis of complex health data). These developments, combined with real world data are transforming health, including the discovery of medicines.*

**12. Which opportunities do you see in digital technologies (such as artificial intelligence and use of real world data) for the development and use of medicines?**

*600 character(s) maximum*

Digital solutions can increase efficiency of clinical trials (CT), speeding up medicine access. If co-designed, they can democratise CT process, increase participation, improve patient experience, safety & retention.

Solutions can assist in monitoring safety and efficacy of medicines - allowing clinicians to make more informed prescribing choices, and payers to regulate the products made available on their internal markets.

They can create real world data and evidence to monitor outcomes over time and capture patients' needs and priorities, improve benefit-risk assessment and adherence.

**13. Which risks do you see in digital technologies (such as artificial intelligence and use of real world data) for the development and use of medicines?**

*600 character(s) maximum*

Digital solutions must adhere to ethical, secure and quality data collection, storage, management and usage. Many patients are uncomfortable sharing data for secondary purposes (other than immediate care). Patient consent and patient-centered models of consent are essential. Public education is required to ensure informed consent decision-making. Patient involvement (PI) is not sufficiently embedded as to inspire confidence that digital solutions will be designed in close and equal partnership with patients. This may be mitigated by greater regulation/guidance on PI requirements and practices.

*Continuous manufacturing, advanced process analytics and control, 3D printing and portable/modular systems, may revolutionise the way medicines are manufactured.*

**14. Are you aware of any obstacles in the EU in taking advantage of technological progress in the manufacturing of medicines?**

- Yes
- No
- I don't know

*Clinical trials are investigations in humans to discover if a new medicine is safe and effective. Clinical trials can also be used to test if a new treatment is more effective and/or safer than the standard treatment. Finally, so called “pragmatic clinical trials” can be conducted to compare the safety and effectiveness of different standard treatments in real world setting.*

15. How could clinical trials in the EU be driven more by patients’ needs while keeping them robust, relevant and safe for participants?

*at most 3 choice(s)*

- By providing more national support for the conduct of so-called “pragmatic trials” with the aim to optimise treatment to patients
- By better coordination for larger trials comparing different treatment strategies (covering medicines and other treatments such as surgery, radiotherapy, physiotherapy)
- By providing support for non-commercial organisations to conduct clinical trials in fields where financial interest is weaker
- By involving patients’ experiences in early phases of medicine design (e.g. factor-in how the disease affects their lives and develop medicines to target symptoms that are particularly important to patients)
- By designing more trials that collect information on medicine tolerability or the impact of a treatment on the quality of life
- By taking into consideration during the design of a trial the burden of trial participation on patients’ life
- Other (please specify).

Please elaborate your reply.

*100 character(s) maximum*

All of the above are needed, especially early patient involvement in R&D.

*Certain medicines are developed based on genes, cells or tissue engineering. Some of these products are developed in hospitals. These are covered by the notion of advanced therapy medicines.*

16. Is the current legal framework suitable to support the development of cell-based advanced therapy medicines in hospitals?

- I strongly agree
- I partially agree
- I disagree

I don't know

---

## Environmental sustainability of medicines and health challenges

---

*Residues of several medicines have been found in surface and ground waters, soils and animal tissues across the Union. As of yet, no clear link has been established between medicine residues present in the environment and direct impacts on human health. However, the issue cannot be ignored and there is a need for a precautionary approach.*

17. What actions at EU level do you consider most effective in limiting the negative environmental impact of medicines?

*at most 3 choice(s)*

- Cleaner manufacturing processes
- Enhanced application of the polluter pays principle
- Review the way the Environment Risk Assessment of a medicine is conducted and its consequences on the authorisation process
- Clear labelling of environmental risks to allow informed choices among equivalent therapeutic options
- Reference to environmental risks in advertising for over-the-counter medicines
- Make medicines known to pose an environmental risk available by prescription only
- Strict disposal rules for unused medicines
- Prescribe medicines only when it is absolutely necessary (more prudent use)
- Medicines dispensed to patients in the quantity actually needed (e.g. number of pills, volume of solution)
- Enhanced wastewater treatment if certain residues could be better removed
- Other (please specify)

Please elaborate your reply.

*100 character(s) maximum*

All of the above. Individuals and corporations have shared responsibility, with burden on the latter

*Antimicrobial resistance (AMR) is the ability of microorganisms (such as bacteria, viruses, fungi or parasites) to survive and grow in the presence of medicines. It reduces progressively the effectiveness of*

*antimicrobials and is caused, among other things, by extensive and improper use of antimicrobial medicines. Antimicrobials include antibiotics, which are substances that fight bacterial infections. AMR can lead to problems such as difficulties to control infections, prolonged hospital stays, increased economic and social costs, and higher risk of disease spreading. AMR is one of the most serious and urgent public health concerns.*

18. Which actions do you think would have the biggest impact on fighting AMR concerning the use of medicines for patients?

*at most 3 choice(s)*

- More prudent use of antimicrobials (if necessary through restrictions on prescriptions)
- Improve the treatment of wastewater and/or manure to lower the levels of antimicrobials
- Raise citizens' and healthcare practitioners' awareness by informing them on appropriate use of antimicrobials and the correct disposal of unused medicines
- Introduce an obligation to use diagnostic tests before prescribing antimicrobials, for example to verify whether it is a bacterial infection before prescribing antibiotics and to define the most adequate antibiotic
- Public finance research and innovation on new antimicrobials, their alternatives and diagnostics
- Encourage public health campaigns that prevent infection through better general health including increased immunity
- Encourage public health campaigns that prevent infection through the use of vaccines
- Encourage better hygiene measures in hospitals
- Other (please specify)
- I don't know

Please elaborate your reply.

*100 character(s) maximum*

All of the above, restrictive measures should account for patient's medical needs.

*Innovation in antimicrobials is limited. For example, no new classes of antibiotics have been discovered for decades. Restricting the use of antibiotics to minimise the risk of developing resistance is a commercial disincentive for investment, as potential investors are concerned that their investment will not be profitable.*

19. Where, in your view, should the EU focus its support for the creation of new antimicrobials or their alternatives?

*at most 2 choice(s)*

- Support academia for researching/discovering new antimicrobials or their alternatives
- Support industry for developing new antimicrobials or their alternatives
- Provide specific support to small and medium-sized enterprises (SMEs)
- Other (please specify)
- I don't know

Please elaborate your reply.

*100 character(s) maximum*

Public-private partnerships for research. Incentives other than IP to ensure affordability.

*Health threats such as the coronavirus disease test the limits of public health systems, the pharmaceutical industry and of the pharmaceutical legislation. From the beginning of the coronavirus (COVID-19) pandemic, the EU has taken measures to coordinate a [response](#), which includes actions ensuring the availability of medicines.*

20. How has the coronavirus (COVID-19) pandemic affected you in relation to access to medicines and treatments?

*600 character(s) maximum*

Lack of access to diagnosis, medical consultation or planned treatment services. Studies suggest disruptions may result in thousands of excess deaths from cancer; in other diseases the impact remains unstudied. Consumer (and even public authority) bulk buying in response to media and research articles purporting the efficacy of one or another medicine in preventing or treating COVID-19 have provoked undue stress for many patients who regularly rely on a particular medicine to treat their condition. Pressure on public funds may affect reimbursement decisions. Clinical trials/research halted.

21. In your opinion and based on your experience, what can the EU do to prepare for and manage such a situation better in the future in relation to pharmaceuticals?

*600 character(s) maximum*

The EU should lead on public health system preparedness. We need collaborative mechanisms to develop new diagnostics, vaccines, medical technologies and treatments swiftly, with mechanisms to ensure equitable access and affordability. Develop quality assurance standard for digital tools. Enable e-prescriptions and access to prescribed medications without physically attending a clinic or pharmacy. Ensure cross-border distribution chains are free from bottlenecks (e.g. labelling). Better tools to prevent/manage temporary shortages e.g. when repurposing existing treatments for pandemic use.

---

## Summary question

---

22. While the Commission is working on improving the EU pharmaceuticals framework, which areas of work do you find most urgent?

*at most 3 choice(s)*

- Improve patients' access to medicines
- Reduce shortages
- Help national authorities ensure affordability for patients and increase health systems sustainability
- Support innovation for unmet needs
- Use of digitalisation to develop medicines
- Help reduce anti-microbial resistance
- Reduce the dependency on essential active ingredients and medicines produced outside the EU
- Environmental sustainability of medicines
- I don't know
- Other (please specify)

Please elaborate your reply.

*100 character(s) maximum*

Affordability is vital. All of the above, pharmaceuticals framework requires a holistic approach.

23. If you were asked before the coronavirus (COVID-19) pandemic, would you have responded differently to any of the previous questions?

- Yes
- No
- I don't know

24. Is there anything else you would like to add that has not been covered in this consultation?

*900 character(s) maximum*

Chronic & rare disease patients want greater accessibility, availability and affordability.

Any strategy should be informed by 'the best interests of the patient' and developed in close/equal partnership with key EU patient representatives (EPF, EURORDIS etc). A public account of engagement should accompany the final strategy.

Any strategy should mandate the EARLY involvement of patients (PI) in R&D process. Guidance should be sought from IMI projects (EUPATI, PARADIGM, PREFER). PI must include defining needs and setting research priorities, research questions, co-designing clinical trials, assessing benefit-risk, monitoring post-marketing safety & effectiveness. PI in HTA & pricing/reimbursement at national level should be encouraged and guided.

We stress understanding unmet needs, and assessing value of new medicines, especially rare disease need for orphan drug regulation.
